PROFESSIONAL SUMMARY

AI engineer at PwC. Previously built LLM agents, RAG pipelines, and voice agents for hospitality clients at ACT. Computer Science graduate from Cairo University.

EDUCATION

Computer Science — Bachelor of Science OCT 2021 - JUN 2025
Faculty of Computers & AI, Cairo University, Giza, Egypt GPA: 3.33

WORK EXPERIENCE

PwC ETIC — AI Engineer JUN 2026 - PRESENT

- Worked in a team building an internal plugin that makes PDF and Microsoft Office documents compliant with PwC standards.

Advanced Computer Technology (ACT) — Software Developer (AI & Backend) OCT 2025 - JUN 2026

- Built a multi-agent hotel concierge in LangGraph for guest requests and policy questions, with **95%** intent classification accuracy.
- Built hierarchical RAG pipeline on PGVector for hotel policy documents; recursive retrieval cut hallucinations on long queries by **30%**.
- Connected the agents to Oracle OPERA PMS via REST APIs to create and track guest service requests, cutting manual front-desk entry by an estimated **40%**.
- Built voice agents on LiveKit and ElevenLabs: a multilingual hotel agent connected to OHIP / OPERA Cloud, and an Egyptian Arabic ordering agent connected to Oracle Symphony POS.

Orange Egypt — Data Engineer Intern AUG 2024 - SEP 2024

- Automated and optimized **ETL** workflows for voucher data using **Apache NiFi** and **dbt**, improving data quality and reliability.
- Explored pipeline orchestration and scheduling with **Apache Airflow** to increase automation and reduce manual data-handling effort.

ValU — Data Science Intern JUL 2024

- Built and evaluated ML models (**Random Forest**, **XGBoost**) for customer lifetime value prediction, achieving an **AUC of 0.70**.
- Optimized LLM prompts for intent extraction and analyzed OpenAI API usage, reducing inference costs by approximately **30%** while maintaining response quality.
- Contributed to a customer-facing chatbot by unifying vendors and geographic regions using **Named Entity Recognition (NER)** for accurate offer retrieval.

TECHNICAL PROJECTS

Graduation Project — AutoML Pipeline (scikit-learn, Python) OCT 2024 - JUN 2025

- Engineered a modular **AutoML** pipeline in Python (**scikit-learn**) with **4 stages**: preprocessing, feature selection, model selection, and hyperparameter optimization.
- Implemented and benchmarked **Grid Search**, **Random Search**, and **Bayesian Optimization** for HPO on tabular ML tasks, analyzing trade-offs in performance and compute cost.

ExpenSum — Smart Expense Tracker (React + Spring Boot + JWT + LLM) APR 2025 - MAY 2025

- Developed a full-stack expense tracker: **React** frontend and **Spring Boot** backend secured with **JWT** authentication.
- Integrated **Mistral (via Ollama)** to convert natural-language inputs into structured expense entries, enabling single-step data capture.

CERTIFICATIONS & ACHIEVEMENTS

Anthropic — Claude Certified Developer – Foundations (CCDV-F) SEP 2026

Amazon Web Services — AWS Certified AI Practitioner (AIF-C01) AUG 2026

DeepLearning.AI — Deep Learning Specialization OCT 2024 - DEC 2024

Huawei ICT Global Competition — AI Section Lead - Cloud Track NOV 2024 - MAY 2025

- Won **Second Prize Globally** and the **Grand Prize in North Africa**; led the team's AI section.

SKILLS

Languages: Python (Advanced), SQL, JavaScript, C++

LLMs, Agents & Voice: LangChain, LangGraph, Multi-Agent Systems, RAG, MCP, Prompt Engineering, Claude API, Claude Code, OpenAI API, Gemini, Hugging Face, Ollama, LiveKit Agents, ElevenLabs

Machine Learning & Data: scikit-learn, TensorFlow/Keras, Pandas, NumPy, Apache Airflow, dbt, Power BI

Databases: PostgreSQL, PGVector, FAISS, MySQL

Cloud & Tools: AWS (Bedrock), Docker, Linux, Git, UiPath
